Clear advantages thanks to clear structures

Flexibility as program

Thanks to its scalability, the AC500 PLC can be adapted to the most different automation tasks: The devices concerned can be used and combined in a flexible way. The number of different parts to be kept in stock is correspondingly minimized.

The AC500's system architecture

CPUs

CPUs are available in the performance classes PM571, PM581 and PM591, can all be programmed in five different languages, and provide an LCD display, an operator keypad, an SD card slot, and two integrated serial interfaces. The CPUs can be simply plugged onto the CPU terminal base.

Optionally, they are also available with integrated Ethernet or ARCNET.

The CPU terminal base

Available in three different versions, enables easy plugging of the CPU and one, two or four communication modules.

The I/O modules

Digital and analog in different versions. Can be simply plugged onto the terminal units – for local expansion of the CPU (max. seven modules) and decentralized expansion via the FBP interface. Flexible use thanks to configurable channels.

The terminal units

Multi-purpose usage for both digital and analog I/Os, for 1, 2 and 3-wire designs. Enable simple prewiring without electronics. For 24 V DC and 230 V AC, optionally for spring or screw-type terminals.

The communication modules

For connection to standard field bus systems and integration into existing networks. Up to four communication modules in any desired combination are allowed at one CPU, resulting in a high degree of communication.

The FBP interface module

With embedded digital I/Os and a field-bus-neutral interface for connecting the chosen FBP connector. For decentralized expansion by up to seven I/O modules.

The SD card

Optional for data logging, downloading and uploading the user program without a PC or a firmware update for all devices (CPU, couplers or I/O modules).

- 1 Back-lighted LCD display and keypad
- 2 SD card slot
- 3 Plug-in communication modules (1 to max. 4)
- 4 Optionally with integrated Ethernet or ARCNET
- 5 FBP interface (for slave)
- 6 Two serial interfaces for programming, ASCII, Modbus or CS31 field bus (master)
- 7 Expandable by up to seven local I/O modules

AC500 grows to meet requirements

Control + communication:

Control Builder AC500

Control Builder AC500 is the engineering tool for all CPU performance of the AC500, designed for standardized IEC 61131-3 programming in different languages. Other features of this tool are: Configuration of all system including field buses and interfaces, extensive diagnostics, alarm handling, integrated visualization and open software in

Programming in conformity with IEC 61131-3

Besides the suitable hardware, a high-performance, user-friendly and convenient engineering tool is indispensable for simple planning, programming, testing and commissioning of an automation application. AC500 Control Builder provides the following functionalities:

- Five standardized programming languages:
 - Function Block Diagram (FBD), Instruction List (IL), Ladder Diagram (LD), Structured Text (ST), Sequential Function Chart (SFC)
- Free graphical function chart (CFC)
- Debugging functions for the program test:
 - Single step
 - Single cycle
 - Breakpoint

Offline simulation

IEC 61131-3 commands can be simulated without a PLC being connected, including the relevant malfunctions. After the program test, the application can be downloaded to the control system.

Sampling trace

Timing diagrams for process variables and storage of data in a ring buffer with event trigger.

Recipe management and watch lists

Values of selected variables are displayed. Pre-defined values can be assigned to variables which can then be downloaded to the control system all at once ("Write recipe"). Ongoing values from the control system can also be pre-assigned for reading into the Watch and Recipe Manager, and stored in memory there ("Read recipe"). These functions are also helpful, for example, for setting and entering control parameters.

Visualization

Includes color change, moving elements, bitmaps, text display, allows input of setpoint values and display of process variables read from the PLC, dynamic bar diagrams, alarm and event management, function keys and ActiveX elements.

Configurators of the communication interfaces

For PROFIBUS DP, CANopen, DeviceNet, Ethernet, Modbus and CS31.

Open interfaces

DDE and OPC.

Programming

Serial or via Ethernet or ARCNET networks.

Engineering interface

Provides access from the programming system to an external project database in which the program source code of one or several automation projects is managed. Optionally, a version control system, such as Visual Source Safe, can be used in order to ensure data consistency of the program code for several different users and projects.

- Comprehensive libraries.
- Windows 32-bit standard.
- Operating systems Windows NT, 2000 and XP.

Ethernet

Ethernet operates with a data rate of 10 MBit/s and as Fast-Ethernet with 100 MBit/s. Ethernet utilizes the producer/consumer model. This means that every station possesses equal rights. While it is transmitting, all other stations listen in and accept the data directed to them. Bus access is regulated by the CSMA/CD procedure (Carrier-Sense Multiple-Access with Collision Detection), where each station may autonomously transmit when the bus is free. If a collision occurs, if two stations begin to transmit simultaneously, both of them will stop transmission and wait for a randomly determined time before they transmit again. Ethernet defines the Layers 1 (Physical Link) and 2 (Data Link) of the OSI model.

The AC500 supports transmission and reception of data using TCP/IP and/or UDP/IP. Further application layers can be implemented by subsequent loading. Simultaneous operation of TCP/IP, UDP/IP and application layer is also assured. The IP, TCP, UDP, ARP, RP, BOOTP, and DHCP protocols are supported as a standard feature, as application layer Modbus/TCP.

Topology

Star- or ring-shaped using Ethernet hub or switch.

Data transmission

Max. 10 MB/s with 10 Base T and max. 100 MB/s with Fast-Ethernet.

Transmission media

Twisted-pair cables with RJ45 connector. The maximum cable length is 100 m for 100 MB/s.

Diagnostics

Detailed diagnostic messages for rapid trouble-shooting are shown on the CPU display. In addition, the device status is indicated at the communication module by four LEDs.

Communication

PROFIBUS DP

AC500 PLCs

Process Field Bus - Decentral Periphery

PROFIBUS DP is an open, high-speed and widely-used field bus. It provides multi-master and master-slave communication in the field area. This field bus can accordingly be used for AC500 and AC31 control system series and for field-bus-neutral FBP devices (decentralized I/Os and intelligent switching devices) via the PROFIBUS-FBP connector.

4

Communication

The masters rule data traffic on the bus. When in possession of the bus access authorization (token), the masters can transmit data without an external request. The passive devices, known as slaves, do not receive any bus access rights; they acknowledge messages received, or respond to a query from a master. Baud rates from 9.6 kBaud to 12 MBaud are supported. A maximum of 126 devices can be operated on the bus.

Data exchange

This is handled predominantly in cyclical mode between master and slave. The requisite communication functions have been specified by the PROFIBUS DP basic functions in accordance with EN 50170. Each master has full write and read access to its assigned slaves, but only read access to the slaves assigned to other bus masters. There is no direct data exchange between masters. Acyclical services (DP-V1) for parameterization and diagnostics between master and slave are also available. This is performed in parallel to the master's cyclical user data traffic.

PROFIBUS DP – the functionality at a glance

- Max. 126 subscribers via amplifier and max. 32 subscribers (master/slaves) per bus segment
- Data transmission rate from max. 12 MBit/s with a cable length of 100 m, up to 93.75 kBit/s with 1200 m
- Multi-master or master/slave communication. Bus access of the masters using token
- Connection of the master CPU and the associated communication module via a 9-pole SUB-D plug connector. Connection of slaves (CPU, I/Os and intelligent switching devices) via FieldBusPlug
- The system cable is a shielded twisted-pair line or a fiber-optic cable; transmission standard EIA RS485

Diagnostics

Detailed diagnostic messages for rapid trouble-shooting are shown on the CPU display. In addition, the device status is indicated at the communication module by four LEDs.

Communication Modbus®

Modbus® RTU (developed by Modicon in 1979)

Modbus® RTU is an open master/slave protocol, and can be easily implemented on serial interfaces.

4

Numerous automation systems have Modbus® RTU interfaces as standard or optional features, and are thus easily able to communicate with the AC500 via its integrated COM1 and COM2 interfaces (RS232 or RS485). The Modbus® is used not only in industrial applications, but also in building installations, in energy optimization systems, for long-distance data transmission and for linking up operator panels.

Communication

By polling, i.e. the master transmits a request to the slave and then receives the response. Both interfaces COM1 and COM2 can operate simultaneously as Modbus interfaces. The Modbus operating mode of an interface is set using the engineering tool.

Topology

Point-to-point via RS232 or multi-point via RS485. With RS232, a maximum of one master and one slave is possible, while with RS485 one master and a maximum of 31 slaves can be operated. The maximum cable length is 15 m with RS232 and 1.2 km with RS485.

Data transfer

Max. 187.5 kB/s. Each telegram has a 16-bit CRC appended. The telegrams permit process data (input/output data) to be written and read, either individually or in groups. The data are packed in the RTU format.

Transmission media

May vary. One widely used option is the RS485 bus physics, a twisted-pair, shielded cable with terminators.

Diagnostics

Detailed diagnostic messages for rapid troubleshooting are shown on the CPU display.

Communication

CANopen and DeviceNet

CANopen (Controller Area Network) and DeviceNet

The CAN protocol was originally developed for the European automotive industry, so as to replace expensive cabling by an affordable network cable. Today, it is also used in the field of automation for transmitting process data between control systems, decentralized

I/O modules, drives, valves, etc. CAN features a high level of transmission security, since large portions of the monitoring mechanisms have been implemented directly in the CAN chip. DeviceNet and CANopen utilize the physical structure and the data transport mechanisms of CAN (Controller Area Network). The difference lies in the transmission protocols. DeviceNet and CANopen can be used correspondingly for the AC500 and AC31 controller series and for field-bus-neutral FBP devices (decentralized I/Os and intelligent switching devices), via the CANopen-FBP plug connector.

Data transmission

Two types of message have been defined: I/O data transfer and direct link. I/O data transfer is used for time-critical process data, while the direct link can be, for example, used for diagnostic messages.

Bus access for subscribers

The connection ID with the lower address has higher priority on the bus. Data is transmitted by the source, while the sinks (i.e. receivers of the data) have likewise been specified during the configuration phase.

CANopen

The bus operates on the master/slave principle with one master and up to 127 slaves. A shielded twisted-pair cable is used, according to ISO 11898. Cable lengths and transmission rates: from max. 40 m at 1 MBit/s to 1000 m at 20 kBit/s.

DeviceNet

The bus operates on the multi-master and/or the master/slave principle, with up to 64 bus subscribers. Two types of shielded twisted-pair cables are used: trunk cable for the main line and drop cable for the branch line.

Transmission rate	125 kBit/s	250 kBit/s	500 kBit/s
Max. cable length of trunk line Trunk cable	500 m (1610 ft)	250 m (820 ft)	100 m (328 ft)
Max. cable length of trunk line Drop cable	100 m (328 ft)	100 m (328 ft)	100 m (328 ft)
Max. cable length per branch line Trunk cable/Drop cable	6 m (20 ft)	6 m (20 ft)	6 m (20 ft)
Max. cable length total branch line Trunk cable/Drop cable	156 m (512 ft)	78 m (256 ft)	39 m (128 ft)

Diagnostics

Detailed diagnostic messages for rapid trouble-shooting are shown on the CPU display. In addition, the device status is indicated at the communication module by four LEDs.

ARCNET

4

ARCNET
(Attached Resource Computer NETWORK)
ARCNET is an open, multi-purpose field bus solution with real-time capability. It can be used for multi-master networking and for programming the AC500 and AC31 controller series, but also for connecting additional ARCNET subscribers, e.g. PCs via an appropriate interface card (see catalog).

Topology

ARCNET is one of the few networks that can be operated in every conceivable topology. Options include bus, star, or tree topologies, or mixtures of these. This means that ARCNET can be used for a broad field of different applications.

Bus assignments

ARCNET operates on the token-passing procedure, where each subscriber has equal rights.

Configuration mechanisms

ARCNET allows to add and to remove subscribers from the network during runtime. When a new subscriber is added, the entire network will be re-configured.

Security mechanisms

A 16-bit CRC is appended to every data packet, and checked by the recipient. If the token is lost, a reconfiguration routine will be initiated, and the network will automatically be restructured. Additionally, diagnostic registers are available.

Physical characteristics

ABB recommends coaxial cables as transmission medium, for direct connection to the CPU. But also twisted-pair cables or (glass, plastic) fiber-optic cables can be connected via bus converters. The line lengths that can be achieved without any intermediate amplifiers depend not only on the used medium, but also on the selected baud rate and the number of subscribers. The ranges per segment vary from approximately 120 m for a simple two-wire bus, up to 3 km for fiber-optics, in each case at 2.5 MBit/s. By providing appropriate hubs, different topologies and transmission media can be combined with each other and the transmission distance can be increased. The coaxial cables used are a type with 93 Ohm, e.g. RG 62.

The permissible twisted-pair cables are specified in IEEE 802.3i-1990. At 2.5 MBit/s and with coaxial cables, for example, the maximum length of a bus segment is 300 m with eight subscribers and without a hub. With twisted-pair cables, under the same conditions, a maximum length of approximately 120 m can be achieved. The maximum transmission length depends on the number of connected subscribers. With coaxial cables, a maximum of 16 km can be achieved; with twisted-pair cables approximately 6 km, in each case at 2.5 MBit/s. The fiber-optic link provides the highest degree of interference immunity. With glass fiber-optics, distances of up to 3 km are possible at 2.5 MBit/s; with plastic fiber-optic cables only small distances of up to approximately 100 m. The baud rate plays no significant role in fiber-optic cable transmission. Here, the range can as well be extended using hubs.

Diagnostics

Detailed diagnostic messages for rapid trouble-shooting are shown on the CPU display.

ARCNET – the functionality at a glance

- Guaranteed collision-free data transmission, guaranteed response times and real-time capability thanks to token-passing
- Large network dimensions: network length 300 m, with amplifier max. 16 km
- Secure, thanks to checksums in the data packet and hand shake protocol between transmitter and receiver
- Variable network structure: bus, tree and star topologies are possible, plus any desired mixtures of them
- Variable networking media, coaxial cables, twisted-pair cables and fiber-optic cables can be mixed
- Automatic subscriber log-on and log-off; the network automatically incorporates new stations in the ring and cancels them as well
- Master-master access: the subscriber that holds the token is the master. With up to 255 masters at the same network
- Data transmission rate of max. 2.5 MBit/s
- ARCNET is configured and programmed using the AC500 Control Builder engineering tool

Communication CS31

AC500 PLCs

CS31

4

CS31 (Communication Serial Field Bus, developed by ABB in 1989) for continuity and migration

CS31 is a proprietary master/slave field bus. It is characterized by simple handling, easy configuration, and inexpensive installation. The COM1 interface of the AC500 can be configured as a CS31 field bus master.

Communication

Is handled using polling, i.e. the master sends a request to the slave and then receives the response. The CS31 operating mode of COM1 is set using the engineering tool.

Topology

Multi-point line, RS485, approved without branch lines. A system consists of one master and up to 31 slaves. The maximum cable length is 500 m, or 2 km with an amplifier. Slaves are primarily decentralized input/output modules with integrated CS31 bus connection.

Data transmission

Is performed at 187.5 kB/s. Each telegram has an 8-bit CRC appended. The telegrams enable process data (input/output data) to be written and read.

Transmission medium

Primarily a twisted-pair, shielded cable with terminators. Other transmission media: fiber-optic cables via a converter (glass fibers max. 3 km, plastic max. 100 m), contact lines, slip rings (bus length max. 50 m) and data photocells.

Diagnostics

Detailed diagnostic messages for rapid trouble-shooting are shown on the CPU display.

 I/O interface for direct connection of up to 7 expansion modules
 Field-bus-neutral FieldBusPlug-Slave interface
 Connection COM1: 9-pole with pluggable terminal block
 Connection COM2: 9-pole SUB-D (socket)

Type	No. of coupler slots	Connection for coupler integrated in CPU	Catalog number	Weight 1 pc./kg
TB511-ETH	1	Ethernet RJ45	1SAP 111 100 R0170	0.215
TB521-ETH	2	Ethernet RJ45	1SAP 112 100 R0170	
TB541-ETH	4	Ethernet RJ45	1SAP 114 100 R0170	
TB521-ARCNET	2	ARCNET COAX	available 2006	

Interface modules

For decentralized I/Os

DC505-FBP Communication via FieldBusPlug with Profibus DP, CANopen, DeviceNet, Modbus
Field-bus-dependent field bus plug required

DC551-CS31 Communication via integrated interface with CS31 system bus
Plug-in electronic modules, terminal block TU5xx required

DC: Channels can be individually configured as input or output

Type	Number of DI/DO/DC	Input signal	Output signal	Catalog number	Weight 1 pc./kg
DC505-FBP	8/-/8	24 V DC	Trans. 24 V DC, 0.5 A	1SAP 220 000 R0001	0.3
DC551-CS31	8/-/16	24 V DC	Trans. 24 V DC, 0.5 A	available 2006	0.3

Binary input/output modules

For central expansion of the AC500 CPUs

For decentralized expansion in combination with interface module DC505-FBP or DC551-CS31

Plug-in electronic modules, terminal block TU5xx required

DC: channels can be individually configured as input or output

Type	Number of DI/DO/DC	Input signal	Relay/ Transistor- outputs	Output signal	Catalog number	Weight 1 pc./kg
DI524	32/-/-	24 V DC	-	-	1SAP 240 000 R0001	
DC532	16/-/16	24 V DC	Transistor	24 V DC, 0.5 A	1SAP 240 100 R0001	
DX522	8/8/-	24 V DC	Relay	230 V AC, 3 A ①	1SAP 245 200 R0001	
DX531	8/4/-	230 V AC	Relay	230 V AC, 3 A ①	1SAP 245 000 R0001	

Analog input/output modules

For central expansion of the AC500 CPUs

For decentralized expansion in combination with interface module DC505-FBP or DC551-CS31

Plug-in electronic modules, TU5xx required

Range individually configurable for each channel

Resolution 12 bits + sign

Type	Number of AI/AO	Input signal	Output signal	Catalog number	Weight 1 pc./kg
AX522	8/8	0 ... 10 V, ±10 V 0/4 ... 20 mA Pt100, Pt1000 Ni1000	±10 V 0/4 ... 20 mA (max. 4 current outputs)	1SAP 250 000 R0001	

① Relay outputs, changeover contacts

Ordering data

Terminal units

For binary and analog expansion modules and interface modules
Please note: for modules with relay outputs, terminal units for 230 V AC (TU531/TU532) are required!

For module-to-terminal-unit assignments, please consult the table!

	TU505 Screw	TU506 Spring	TU515 Screw	TU516 Spring	TU531 Screw	TU532 Spring	TU551 Screw	TU552 Spring
DC505-FBP	x	x						
DC551-CS31							x	x
DI524			x	x				
DC532			x	x				
DX522					x	x		
DX531					x	x		
AX522			x	x				

Type	for	Supply	Connection	Catalog number	Weight 1 pc. /kg
TU505	FBP Interface modules		Screw terminals	1SAP 210 200 R0001	0.2
TU506	FBP Interface modules		Spring terminals	1SAP 210 000 R0001	0.2
TU515	I/O modules	24 V DC	Screw terminals	1SAP 212 200 R0001	0.2
TU516	I/O modules	24 V DC	Spring terminals	1SAP 212 000 R0001	0.2
TU531	I/O modules AC/Relay	230 V AC	Screw terminals	1SAP 217 200 R0001	0.2
TU532	I/O modules AC/Relay	230 V AC	Spring terminals	1SAP 217 000 R0001	0.2
TU551	CS31-Interface modules	24 V DC	Screw terminals	1SAP 210 600 R0001	0.2
TU552	CS31-Interface modules	24 V DC	Spring terminals	1SAP 210 400 R0001	0.2

Accessories for the AC500

Type	for	Description	Catalog number	Weight 1 pc. /kg
TK501	CPUs AC500 COM2	Programming cable Sub-D/Sub-D length 5 m	1SAP 180 200 R0001	
TK502	CPUs AC500 COM1	Programming cable Sub-D/ terminal Block, length 5 m	1SAP 180 200 R0101	
MC502	CPUs AC500	Memory card (SD card) 128 MB	1SAP 180 100 R0001	
TA521	CPUs AC500	Lithium battery for data buffering	1SAP 180 300 R0001	
TA523	I/O Modules	Pluggable marker holder (10 pcs.)	1SAP 180 500 R0001	
TA524	Terminal base	Dummy communication module	1SAP 180 600 R0001	
TA525		Set of 10 white plastic markers	1SAP 180 700 R0001	
TA526	CPU terminal	Accessories for backplane mounting base (10 pcs.)	1SAP 180 800 R0001	

Programming package PS501 Control Builder

For all CPUs AC500

All programming languages according to IEC 61131-3

Contains: 5 programming languages, Sampling - Trace, Debugging, Offline simulation
Trace recording (multi-channel), recipe management, Continuous Function Chart

Languages: German/English/French

Scope of delivery: Software, libraries and documentation (PDF) on CD-ROM

Type	for	Description	Catalog number	Weight 1 pc. /kg
PS501	all CPUs AC500	Programming Package PS501 Control Builder AC500	1SAP 190 100 R0001	

Approximate dimensions

CPU terminal base TB511, TB521 and TB541

4

I/O expansion and interface module terminal unit

Approvals

Like all ABB products, the AC500 components, are as well tested in conformity with the applicable European, North American and international guidelines, and approved by the organizations responsible. These include GL, DNV, BV, RiNA, LRS and cUL. The products bear the CE symbol.

Certified quality

The entire process involved in creating an ABB product – from the original idea to the actual sale – is, of course, monitored by a quality management process certified under DIN ISO 9001.

In harmony with the natural environment

Protection of the natural environment is integral to ABB's corporate philosophy. This includes both resource-economy and the avoidance of problematical substances, plus recycling-friendly construction and long-lived products. These aspects are taken fully on board by an integrated eco-management system conforming to ISO 14001, whose implementation is repeatedly verified by regular eco-audits. And for newly developed products ABB now conducts a lifecycle assessment as well.

AC500 approvals

cUL, USA, Canada

GL, Germany

DNV, Norway

BV, France

RiNa, Italy

Lloyd's
Register Of
Shipping

LRS, United Kingdom
